IT COOLING

CLOSE CONTROL AIR CONDITIONERS

w-NEXT LEGACY CHILLED WATER

**HIGH PRECISION
AIR CONDITIONERS,
FROM 7 TO 211 kW**

3 Versions available

- ▶ Single chilled water coil
- ▶ Double chilled water coil
- ▶ High temperature

w-NEXT LEGACY

CHILLED WATER

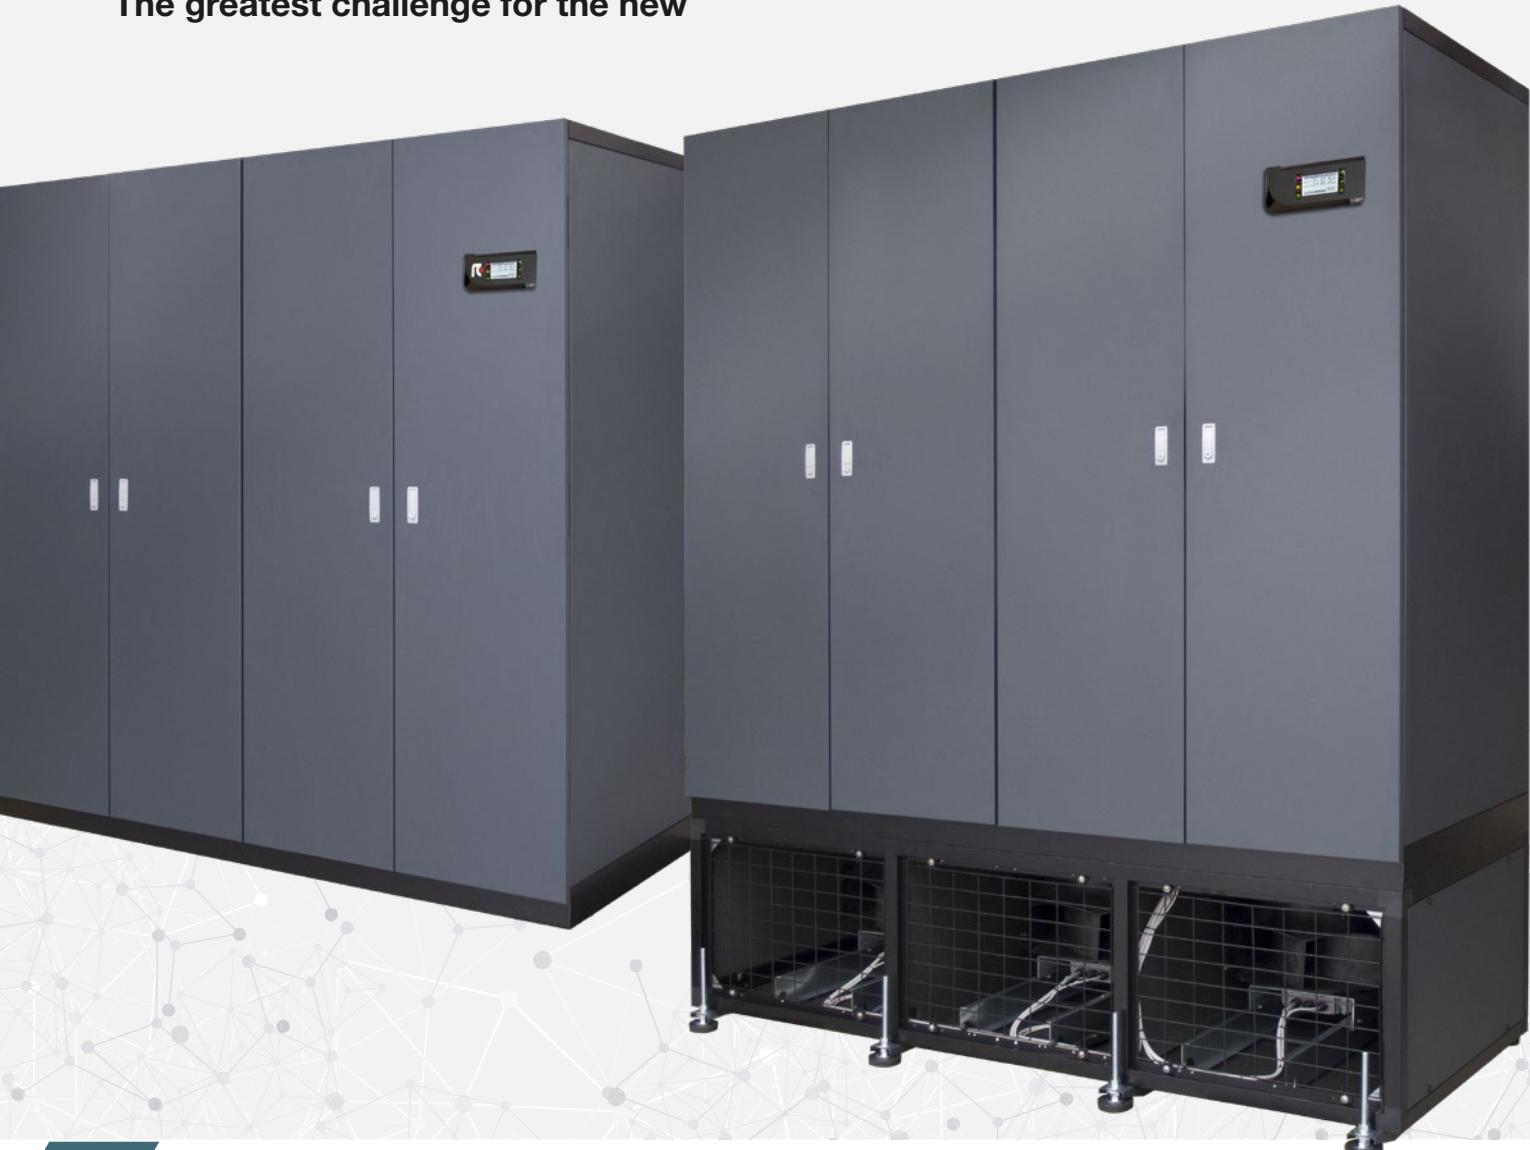

ENGINEERED TO SATISFY THE MOST CHALLENGING IT INFRASTRUCTURE EFFICIENCY NEEDS

**UNPARALLELED
EFFICIENCY**

The overall growth of data exchange inside modern data centers necessarily results in a higher localized power load density, also known as 'hot spots'.

The greatest challenge for the new

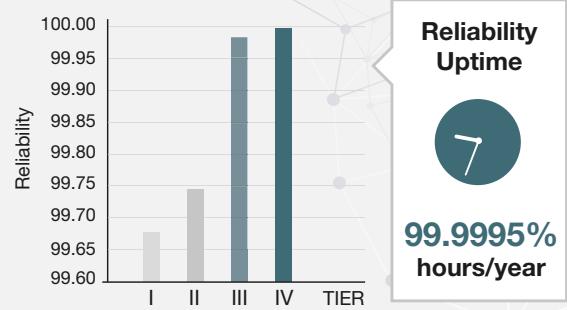

w-NEXT LEGACY range is to achieve perfect heat removal, ensuring the highest energy efficiency and reliable operations throughout the data center.

OUR MISSION: THE PERFECT MATCH BETWEEN EFFICIENCY AND RELIABILITY

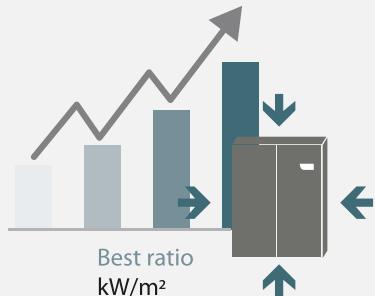

Nowadays efficiency is no longer considered to be just saving energy in respect to the single unit, but it takes into account the system's PERFORMANCE, COMPLETE RELIABILITY and MODULARITY over the years.

By offering w-NEXT LEGACY as a solution to technological cooling problems, the company has put great effort in the use of well-known high quality components such as the EC PUL fans installed as standard in all units, together with a perfect integration of the units with the BMS (building management systems).

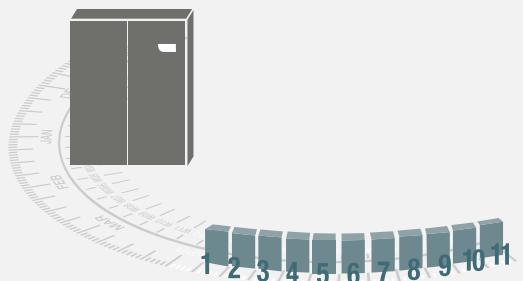

PERFECT ENERGY MANAGEMENT

It is well known that set loads (W/m²) in technological applications are continuously increasing. The increase in data exchange is in fact generating greater heat loads that are usually localized in 'hot spots'. This requires better performance from the air conditioning system that should, however, take up as little space as possible. In this sense, w-NEXT LEGACY as the air conditioner with the best supplied power/footprint ratio in the market. Because space is value.

CUSTOMER-ORIENTED APPROACH

w-NEXT LEGACY range features 360° versatility, both as concerns capacities (from 6 to 235 kW), as well as configurations thanks to 5 different cooling solutions. When even this is not enough, the 45-year experience of the RC IT Cooling brand is key to ensuring tailor-made solutions dedicated to specific application requirements.

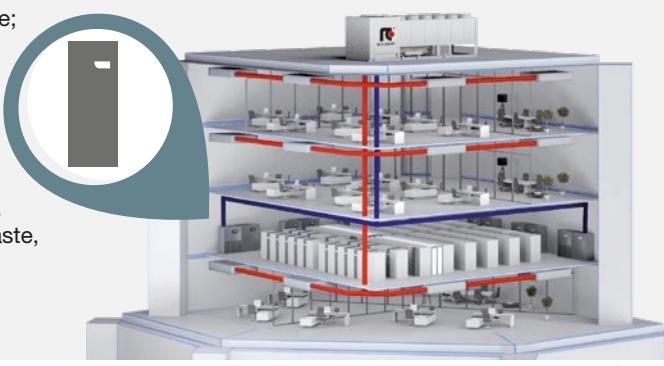

THE INNOVATIVE HEAT RECOVERY SYSTEM

The heat generated by powerful computer servers is a precious energy source; why do we waste it? This thermal energy can be recovered and reused if necessary, turning it into a precious economic asset.

Through innovative heat recovery, the SMART THERMAL ENERGY MANAGEMENT SYSTEM, RC IT Cooling products synergistically match both the cooling sources of the data center with the heating requirements inside the building, by moving the heat from the data center to other office areas. A forward-looking system that combines perfect comfort with zero energy waste, improving the energy class rating of the building and providing large annual energy savings.

TECHNOLOGICAL CHOICES

New EC PUL fans

Specifically designed for high precision air conditioners, the new EC PUL (Polymeric ULtralight) fans of w-NEXT LEGACY feature a new compact design and an innovative blade geometry resulting in more air flow rate and reduced operating costs.

In addition to the incredible performance of the EC motor, the advantages compared to standard EC fans are:

- ✓ Reduced ventilation costs
- ✓ -25% power absorption
- ✓ +20% efficiency (calculated considering the same operating point)

Advanced unit control

w-NEXT LEGACY features a new intelligent electronic heart to keep constant control over all the operating and environmental parameters of the site.

Designed and developed internally, the new control is highly configurable according to specific user requirements, ensuring:

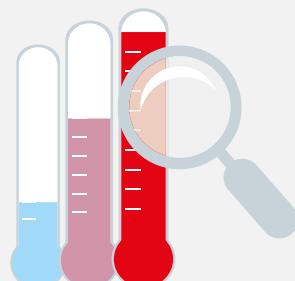

- ✓ Automatic restart from blackout
- ✓ Integrated management system up to 10 units (LAN)
- ✓ ACTIVE REDUNDANCY management
- ✓ Full BMS compatibility (Ethernet, Bacnet, SNMP, Modbus, TCP/IP, LON)
- ✓ BLACK BOX for predictive analysis
- ✓ DEW POINT control
- ✓ ADAPTIVE SET POINT management
- ✓ ACTIVE FREE COOLING management

Adaptive set point

Thanks to an advanced algorithm called ADS (Adaptive Set Point), all the indoor w-NEXT LEGACY units instantaneously detect the real thermal load within the data center. This information is therefore conveyed to the outdoor chillers, improving their operation.

The energy consumption decreases considerably by a precise management of 4 variables:

- ✓ Dynamic chiller set point variation
- ✓ Dynamic chiller water flow variation (only with inverter pumps)
- ✓ Adoption of the free cooling mode (when possible)
- ✓ Adoption of the ACTIVE REDUNDANCY system to better exploit stand-by chillers

w-NEXT LEGACY

w-NEXT2 2-Section air conditioner

Conceived to run your data center at peak efficiency

The new w-NEXT2 air air conditioners have been specifically developed to answer the high efficiency requirements of server rooms. They feature 2 independent modules; the first one containing a coil usually located over the floor, and the second module located under the floor that contains the fan section.

This efficient and versatile solution matches even the most diverse design requirements of medium-large data centers.

Active Redundancy

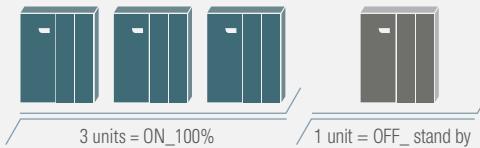

The perfect match between reliability, efficiency, and lowest TCO

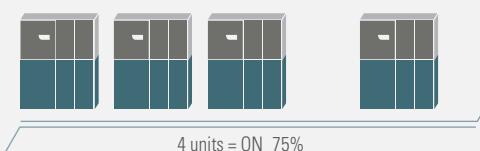

The reliability inside a data center, usually ensured by the adoption of back-up units (N+1, N+2, etc.), now shows a new definition.

The w-NEXT LEGACY units, thanks to its innovative EC PUL fans and an advanced algorithm to balance the heat loads among the units (including those units that usually remain on stand-by), achieve a real ACTIVE REDUNDANCY, thus combining concepts that have always been colliding such as reliability, efficiency and Total Cost of Ownership.

PASSIVE REDUNDANCY

ACTIVE REDUNDANCY

Active Free Cooling

Perfectly in line with an eco-friendly strategy to deliver premium efficiency levels, w-NEXT LEGACY adopts an advanced free cooling system to exploit the cooling potential of outdoor air to cool the data center.

This technology is available as:

✓ **DIRECT Free Cooling** (savings up to 90%)

Through the use of a plenum with modulating dampers, the outdoor air is recovered and reused inside the data center after temperature and humidity control.

✓ **INDIRECT Free Cooling** (savings up to 60%)

Using the water as exchange fluid, which is moved by an outdoor RC brand chiller.

Annual energy savings up to 90% compared to a traditional system

Annual energy savings up to 35% compared to a traditional system

Annual energy savings up to 20% compared to a traditional system

Average operating hours of one unit in direct free cooling mode inside a data center requiring 1MW cooling capacity, working 24/7.

COOLING MODES

All-round flexibility as a service offered for any type of system.

Chilled water units

w-NEXT / w-NEXT2

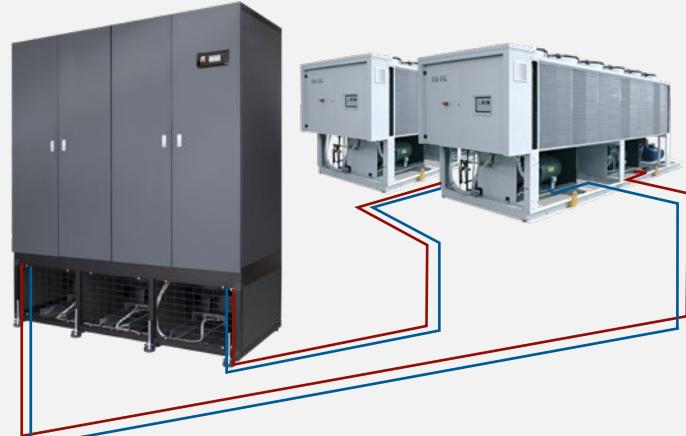

w-NEXT S/ w-NEXT2 S
w-NEXT HD/S
w-NEXT HD/K

Chilled water air conditioners using water coming from a chiller as a means to transfer heat. The liquid flow in the unit's water coil is managed by an internal 2 or 3-way valve.

Chilled water units with double chilled water coil

w-NEXT DF / w-NEXT2 DF

w-NEXT DF
w-NEXT2 DF

These units are provided as standard with two water circuits that never work simultaneously, as they are one in 100% back up to the other. Such circuits are connected to two different chiller lines completely independent of one another.

The Dual Coil version is the perfect solution for those systems where RELIABILITY, SAFETY and REDUNDANCY are at utmost importance.

MANAGEMENT AND CONTROL SYSTEMS

In a policy of ‘total communication’, W-NEXT LEGACY presents several interconnection solutions with the latest BMS systems.

Data Center Manager

Group device

DATA CENTER MANAGER is a centralized management system that ensures a smart communication between indoor chilled water units and the outdoor chillers.

The device manages the outdoor units according to the inlet and outlet temperature registered by the probes and by request of the indoor unit.

Main features:

- ✓ All-in-one solution for an easy installation
- ✓ Management of up to 8 units (with the same or different power ratings), on 2-pipe systems
- ✓ 8.4" touch-screen display
- ✓ Some units can be given priority
- ✓ Possibility of choosing the number of units on standby - dynamic standby
- ✓ Evenly distributes operating hours of each unit

w-NEXT LEGACY

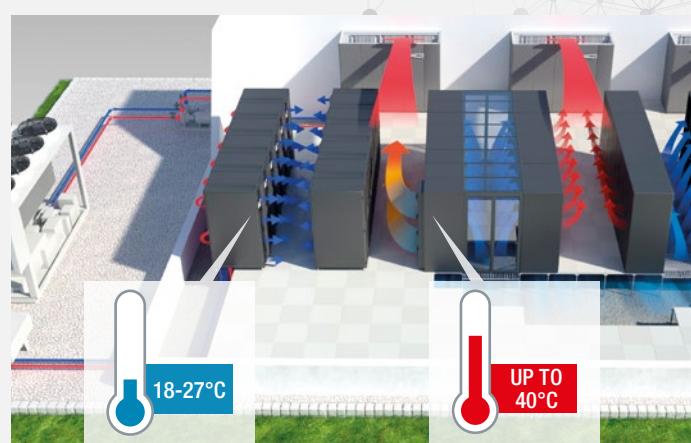

FOR HIGH TEMPERATURE ENVIRONMENTS

High density version for high temperature environments

w-NEXT HD/K

The need to achieve increasingly greater efficiency and lower TCO values, has led to an increase in the inlet air temperature of up to 27°C (ASHRAE, 'Thermal Guidelines for Data Processing Environments') and a consequent increase of the respective discharge temperatures.

Specially developed to handle inlet temperatures of up to 40°C and higher chilled water temperature, w-NEXT HD K series is the winning answer for environments with hot and cold aisles.

KEY BENEFITS

+23 CHILLER COOLING CAPACITY

+16% BETTER CHILLER EFFICIENCY

ClimaPRO DCO

Chiller plant control and data center optimisation system

ClimaPRO DCO ensures perfect HVAC plant room control by managing each single component involved in the production and distribution of the thermal and cooling energy.

According to the actual efficiency values of the units, this advanced management system optimally balances the unit loads, regulates the operating set-points and dynamically manages the water flow of the entire system.

ClimaPRO DCO can be integrated to a BMS system or it can be completely independent.

Main features

- ✓ Acquisition of real-time data from the plant
- ✓ Measurement of energy indices for the units and the entire system
- ✓ Control and management of each single unit or at a plant room level
- ✓ Active Optimization based on real time data measurement
- ✓ Detailed energy reporting and customized analysis
- ✓ Chart building for trend analysis

AIRFLOW CONFIGURATIONS

The OVER versions

with air discharge from the top usually take the air from the front, rear or bottom side of the unit, whilst they deliver the cold air from the top through air passages, false ceilings and plenums.

w-NEXT

OVER

Ideal application

Data center dimensions: small-medium

Airflow: OVER, air discharged from the top, frontal air intake

Raised floor: absent
Room Height < 3m

Airflow: OVER, air discharged from the top, air intake from the rear/bottom of the unit O.3

Raised floor: absent
Room Height < 3m

Airflow: OVER, air discharged from the top, air intake under the floor

Raised floor > 400 mm
Room Height < 3m

W-NEXT LEGACY

The UNDER versions

with air discharge from the bottom usually take the air from the top of the unit, directly from the environment or through air passages or plenums. The cold air delivery is on the bottom of the unit, under the raised floor.

w-NEXT UNDER

Ideal application

Data center dimensions: small-medium

Airflow: UNDER, air discharged from the bottom under the floor with air intake from the top

Raised floor > 400 mm
Room Height < 3m

Airflow: UNDER, air discharged from the bottom and air intake from the top-rear

Raised floor > 400mm
Room Height < 3m

w-NEXT2

2-Sections UNDER

Ideal application

Data center dimensions: medium-large, very large

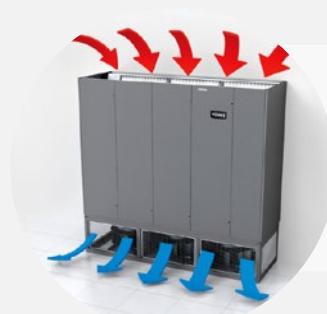

Airflow: UNDER, air discharged from the bottom (fan section under the floor) with air intake from the top

Raised floor > 600 mm
Room Height < 3m

Airflow: UNDER, air discharged from the bottom (fan section above the floor) with air intake from the top

Raised floor ≤ 600mm
Room Height > 3m

Airflow: UNDER, air discharged from the frontal bottom side (fan section above the floor) with air intake from the top

Raised floor: absent
Room Height > 3m

Airflow: UNDER, air discharged from the bottom-rear side (fan section under the floor) and air intake from the top-rear

Raised floor > 600mm
Room Height < 3m

w-NEXT LEGACY

High precision chilled water air conditioners,
from 6,7 to 213 kW

Single Section Close control air conditioners

Total pressure drop (Coil + Valve)	(1) kPa	46,5	35,1	52,2	45,6	64,4	26,7	49,1
FANS								
Fans type		EC FAN						
Quantity	N°	1	2	2	3	3	3	4
Air flow	(3) m³/h	13800	19700	23000	29000	33300	40100	51700
NOISE LEVEL								
Sound Power	dB(A)	85	80	78	82	80	85	85
Sound Pressure	(4) dB(A)	68	63	61	65	62	67	67
SIZE AND WEIGHT								
Length	(3) mm	1305	1630	1875	2175	2499	2899	3510
Width	(3) mm	930	930	930	930	930	930	930
Height	(3) mm	1980	1980	1980	1980	1980	1980	1980
Weight	(3) kg	435	585	635	750	850	975	1103

Notes:

1 Indoor conditions (in) 26°C - R.H. 40%; Water temperature (in/out) 10°C/15°C; ESP= 20Pa.

2 SHR = Sensible cooling capacity gross / Total cooling capacity gross.

3 Unit in standard configuration/execution, without optional accessories

4 Average sound pressure level, at a distance of 1m, for units in a free field on a reflecting surface. The average sound pressure level is calculated based on the sound power level measured in accordance with ISO 3744.

w-NEXT LEGACY

High precision chilled water air conditioners, from 14,7 to 243 kW

Single & 2-Section with double chilled water coil
