

# TELECOM SOLUTIONS

## AIR CONDITIONERS FOR TELECOMMUNICATION FROM 1,5 TO 20 kW

- ▶ Low operational and maintenance costs
- ▶ Wide range of full inverter solutions
- ▶ Reliability and extended operation
- ▶ Advanced control
- ▶ Free-cooling

# TELECOM SOLUTIONS

## RELIABILITY AND EXTENDED OPERATION

### Reliability and extended operation

Constructional rationality plus the proven high quality of the components ensure that MEHITS's units offer:

- ✓ Continuous operation (24 hours a day, 365 days a year).
- ✓ Design life of over 10 years.
- ✓ MTBF and MTTR values at the top of their category.

## ADVANCED CONTROL

### The microprocessor allows:

Stand-by and alarm management

The microprocessor allows:

- ✓ Easy-to-use navigation;
- ✓ Advanced management of the stand-by unit;
- ✓ Automatic rotation on a time basis;
- ✓ Alarm rotation;
- ✓ Alarm management and transmission;
- ✓ LAN management between connected units;
- ✓ Easy connection to supervisory systems;
- ✓ Double power supply management;
- ✓ Multi-language management;
- ✓ Emergency function;
- ✓ Manual function.

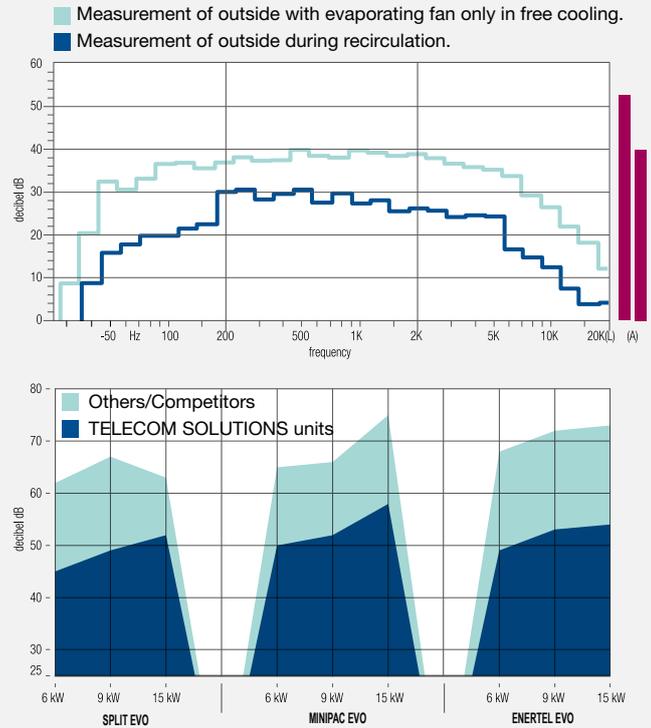

# EXTREMELY LOW NOISE

## Minimum sound emissions

Reducing sound emissions is one of the greatest needs of air conditioning units located in urban areas.

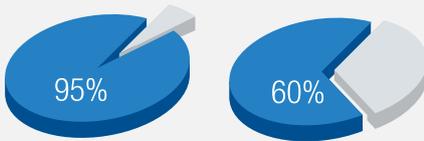

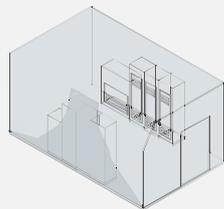

TELECOM SOLUTIONS is the new range of high efficiency air conditioners featuring a strong sound emission reduction:

- ✓ Sound proofing delivery plenum;
- ✓ Anti-vibration feet for the unit and the fans fastening;
- ✓ Compressor inside a sound proofing box with lead;
- ✓ Sound proofing recirculating fans cap;
- ✓ Condensing pressure check through the fan speed regulator;
- ✓ Autotransformer to reduce vibration.

Unmanned premises with almost no latent heat value.  
Required S.H.R. ≥95%

Manned premises with latent heat value.  
Required S.H.R. ≥60%

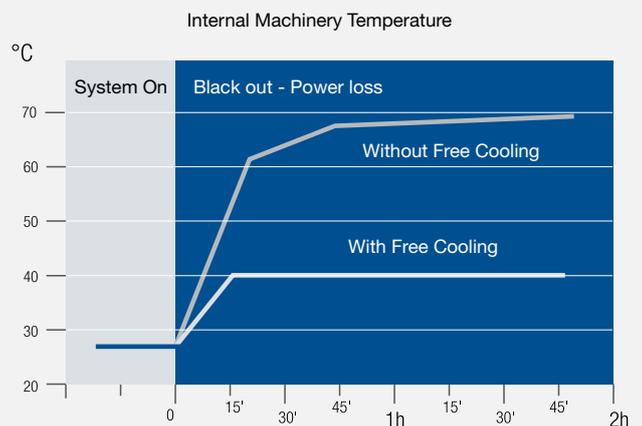

## High capacity sensitive cooling

- ✓ No latent cooling required.
- ✓ Since the technological rooms are unmanned, the latent heat values remain almost zero.
- ✓ Thus, the requested S.H.R. values (Sensible and Total Cooling Capacity Ratio) are 95%, compared to typical S.H.R. values of around 60% in the manned premises.

## Black-out management

- ✓ UPS connections system (48V DC)
- ✓ For the double power supply versions (UPS, 48V DC), the Free cooling function is instantly activated in the event of a blackout.

# TELECOM SOLUTIONS

**MEHITS** Telecom Solutions is the result of a research and development project among different telecommunications companies aimed at finding an innovative no-compromise solution for the modern telecommunication applications.

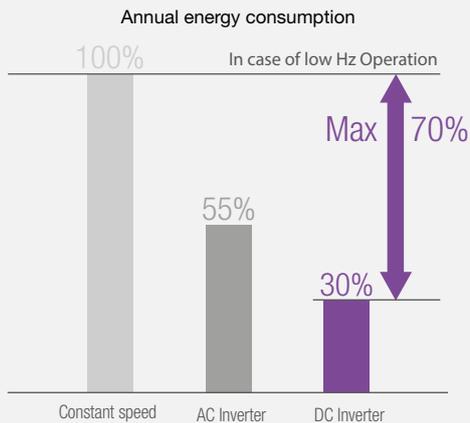

## INVERTER TECHNOLOGY

The inverter driven compressor is a key component for MEHITS's products: thanks to its extremely precise regulation of the power capacity through variable frequency, it can strongly increase the efficiency of partial loads.

Compared to a traditional on/off compressor, the inverter technology ensures a quick achievement of the desired set point and a precise control over temperature variations. Once the desired value has been reached, the compressor rotation decreases, reducing energy consumption and effectively maintaining the temperature conditions over time.

In this respect the new MEHITS's Telecom Solutions range represents the ultimate solution in air conditioning in the telecommunications sector, thanks to the most updated DC Inverter Brushless compressors and the new generation EC fans combined with the electronic thermostatic valve.

Both solutions allow for perfect adaptation of the unit's performance to the real requirements of the building even at partial load, which represents more than 75% of the operating time of the system. This ensures an energy savings of up to 50% more than solutions based on traditional ON/OFF compressors.

### Low operational and maintenance costs

Key features of efficient and long-lasting air conditioning systems are reduced energy consumption combined with low operational and maintenance costs.

For this reason the modern FULL INVERTER units deliver the best cost and benefit ratios, with significant advantages in terms of TCO (Total Cost of Ownership). Consequently, the payback time is 2 years compared to NON FULL INVERTER solutions where payback per unit only comes after 10 years.

### Double Advantage: FREE COOLING + INVERTER

It is well known that energy savings are guaranteed with FREE COOLING systems. Telecom Solutions range combines innovative FULL INVERTER compressors with the free cooling technology, thus resulting in 35% higher energy savings compared to traditional on/off solutions.

# SPLIT EVO - SPLIT EVO INV

Split air conditioners for telecommunication shelters available in on-off and inverter version. Free cooling.

Cooling Capacity: **4,9 ÷ 17 kW**

## UNIT DESCRIPTION

SPLIT EVO split air conditioners for telecommunication shelters combine an outdoor condenser unit (available in both the BASIC and LT low temperature versions) with the indoor unit.

Available for ceiling or wall installation, ENERGY SPLIT, ENERGY SPLIT INV units are available with product ranges from 4,9 to 17kW, both in the ON-OFF and Inverter technology. All the units are equipped with external panels in electrogalvanised powder coated steel sheets and, upon request, with a Free Cooling damper which ensures 30% annual energy savings compared to standard systems.

The evaporating section fan works on a direct current at 48 Volts for a reliable operation even in emergency situations (optional). MEHITS units are made to ensure a standard level of operation even under extreme environmental conditions with temperatures of up to +48°C.

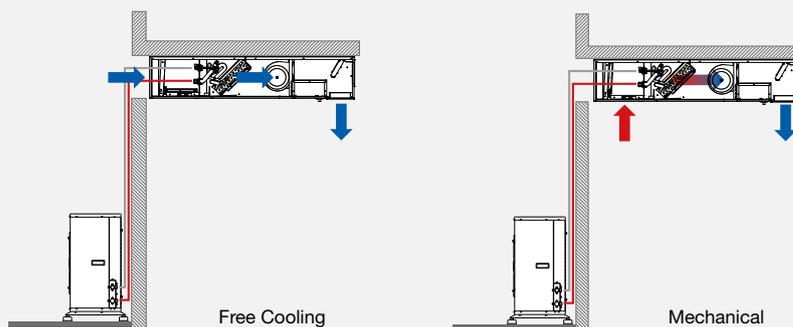

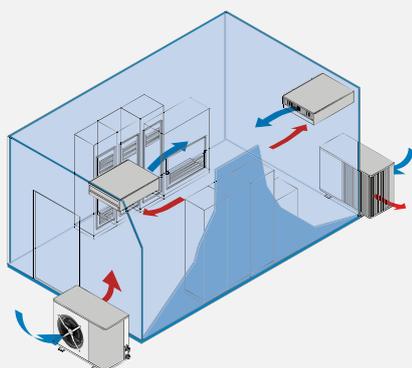

## FEATURES

- ✓ Structure and panelling in electrogalvanised powder coated steel for maximum resistance to rust.
- ✓ Total reliability and functionality of the compressor and all other components guaranteed by leading companies in the telecoms sector.
- ✓ Contacts for alarms and the machine's functioning state signals.
- ✓ Universal terminal board for complete outer control of the PLC unit.
- ✓ Condensing control for lower noise levels.
- ✓ Safety pressure switches.
- ✓ Condensing coil protection grills.
- ✓ User terminal supplied as standard.
- ✓ Wide range of accessories for easy and correct installation, and for an efficient air treatment system.
- ✓ Widespread after sales network.

## MAIN OPTIONS

- ✓ Electric heating elements.
- ✓ Serial cards for BMS interconnection.
- ✓ Double power supply (Network + UPS 48V DC).
- ✓ Free Cooling damper with opening from 0 to 100%.
- ✓ EC fans for outdoor condenser units.

# ENERTEL EVO - ENERTEL EVO INV

Packaged air conditioners for telecommunication shelters available in on-off and inverter version. Free Cooling. Cooling Capacity: 2 ÷ 15 kW

## UNIT DESCRIPTION

Available with cooling capacity from 1,9 to 15 kW. They are direct expansion packaged systems for indoor installation, which are fitted with external panels in powder coated steel sheets.

The units can be fitted with a Free Cooling damper (optional) that ensures 30% annual energy savings compared to standard systems, while the evaporating section fan works on a direct current at 48 Volts for a reliable operation even in an emergency situation. (optional).

MEHITS units are made to ensure a standard level of operation even under extreme environmental conditions with temperatures of up to +48°C. ENERTEL EVO, ENERTEL EVO INV are available in two different versions: in the UNDER units, the outlet air flow is flush to the ground and pointed downwards, while in the OVER versions (for ENERTEL EVO units only) the air flow inlet is from the front side and the air flow outlet is upwards or frontal.

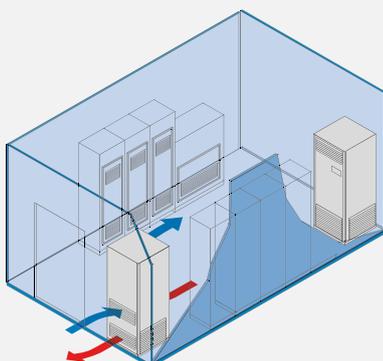

## FEATURES

- ✓ Structure and panelling in electrogalvanised powder coated steel for maximum resistance to rust.
- ✓ Total reliability and functionality of the compressor and all other components guaranteed by leading companies in the telecoms sector.
- ✓ Contacts for alarms and the machine's functioning state signals.
- ✓ Universal terminal board for complete outer control of the PLC unit.
- ✓ Condensing control for lower noise levels.
- ✓ Safety pressure switches.
- ✓ Condensing coil protection grills.
- ✓ User terminal supplied as standard.
- ✓ Wide range of accessories for easy and correct installation, and for an efficient air treatment system.
- ✓ Widespread after sales network.

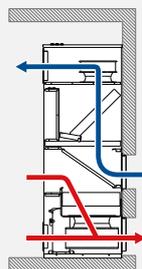

## MAIN OPTIONS

- ✓ Electric heating elements.
- ✓ Serial cards for BMS interconnection.
- ✓ Double power supply (Network + UPS 48V DC)
- ✓ Free Cooling damper with opening from 0 to 100%.
- ✓ Evaporator EC fans (for models 0003 ÷ 0056).

# MINIPAC EVO - MINIPAC EVO INV

Packaged air conditioners for telecommunication shelters available in on-off and inverter version. Free-cooling.

Cooling Capacity: **4,9 ÷ 17 kW**

## UNIT DESCRIPTION

The MINIPAC EVO, MINIPAC EVO INV air conditioners for telecommunication shelters are direct expansion packaged systems for outdoor installation. Available with cooling capacities from 2 to 20kW, all the units are fitted with external panelling in electrogalvanised powder coated steel sheets. The units can be fitted with a Free Cooling damper (optional) that ensures 30% annual energy savings compared to a traditional solution. The evaporating fan works on a constant current of 48 Volts to ensure reliable operation even in an emergency situation.

MINIPAC EVO and MINIPAC EVO INV units are available in two different versions: with air flow outlet from the upper side (OVER) or from the bottom (UNDER).

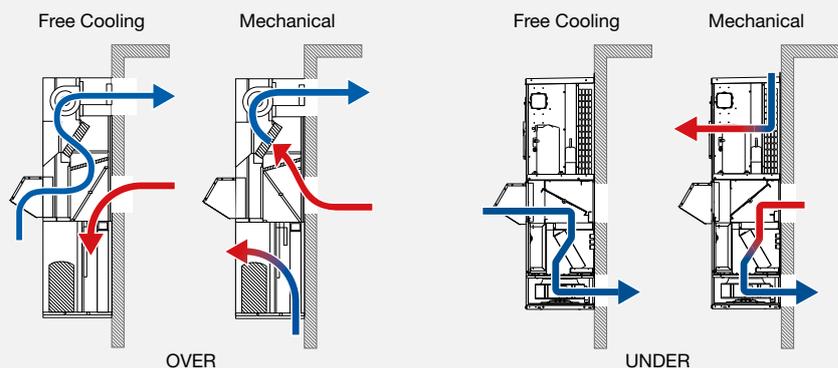

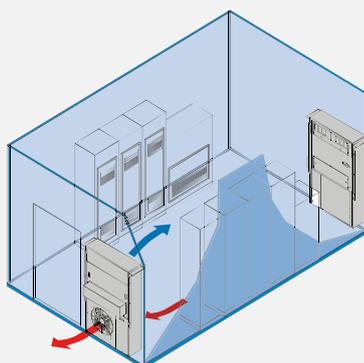

## FEATURES

- ✓ Structure and panelling in electrogalvanised powder coated steel sheets for maximum resistance to rust. (Peraluman panelling available upon request)
- ✓ Total reliability and functionality of the compressor and all other components guaranteed by leading companies in the telecoms sector.
- ✓ Contacts for alarms and the machine's functioning state signals.
- ✓ Universal terminal board for complete outer control of the PLC unit.
- ✓ Condensing control for lower noise levels.
- ✓ Safety pressure switches.
- ✓ Condensing coil protection grills.
- ✓ User terminal supplied as standard.
- ✓ Wide range of accessories for easy and correct installation, and for an efficient air treatment system.
- ✓ Widespread after sales network

## MAIN OPTIONS

- ✓ Electric heating elements.
- ✓ Serial cards for BMS interconnection.
- ✓ Double power supply (Network + UPS 48V DC).
- ✓ Free Cooling damper with opening from 0 to 100%.
- ✓ Evaporator EC fans.

## SPLIT

# FREE COOLER

## Free cooling unit for telecommunication shelters

### UNIT DESCRIPTION

Designed for the cooling of highly technological environments (telecommunication shelters and cabinets), FKO/FKI FREE COOLER units feature an advanced free cooling system that utilises the outdoor air to lower the indoor environment temperature. Outdoor air absorbed from the fan is filtered and then released to the indoor space.

The unit is available in indoor (FKI) or outdoor versions (FKO), in both cases provided with a waterproof jacket in order to avoid even a drop of water from entering the environment. Directly managed by the PLC controller, the units can be coupled to a TELECOM air conditioner s range. This ensures getting the best advantage from the free cooling operation, whenever possible.

For the stand-alone operation an electrical board kit able to manage the unit and two further pre-existing air conditioners are also available. In pre-existing plants, this solution offers the opportunity to add the free cooling function at a later date.

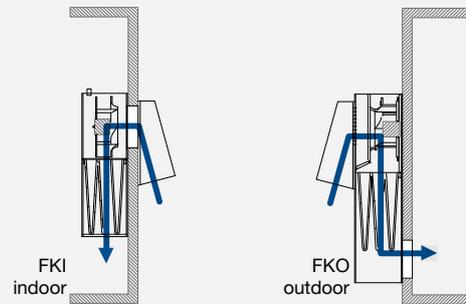

### FEATURES

- ✓ Structure and panelling in electrogalvanised powder coated steel sheets for maximum resistance to rust.
- ✓ Total reliability and functionality of the compressor and all other components guaranteed by leading companies in the telecoms sector.
- ✓ 48 VDC EC radial fan with continuous speed modulation.
- ✓ Class G3 air filter.

### MAIN OPTIONS

- ✓ Electrical panel for the unit's stand-alone management.
- ✓ Clogged filter sensor.
- ✓ Air prefilter in metal frame.
